

# UniMax Access Points

WiFi Access Points for widespread coverage, super-fast WiFi speeds and uninterrupted digital experiences.

## Introduction

Wireless hotspots have exploded in the last 10 or so years. With devices being heavily mobile and wireless enabled, the requirement for high performance WiFi networks has scaled exponentially. WiFi has enabled ease of connectivity, with consistent and reliable connected experiences.

Behind ensuring uninterrupted WiFi access, lies a strong hardware backbone of WiFi Access Points facilitating this experience to end users. WiFi Access Points have continued to evolve since the inception of WiFi technology. WiFi Access Points today have been developed to support high density environments and high concurrency of users while ensuring super-fast WiFi connectivity individually.

As work and personal devices go increasingly mobile; enterprise, retail, telecom, hospitality, healthcare, and many other industries now look at provisioning WiFi access throughout their entire establishments. The proliferation of IoT devices and remote workplaces requires different backbones coming in from satellite & LTE backhauls as opposed broadband cabled lines for supporting connectivity requirements.

## Our solution, for you.

Our portfolio of Access Points has evolved starting from 802.11ac Access Points to 802.11ax Access Points and now diving into Next Generation networking abilities with WiFi 6-E Access Points.

We offer UniMax Access Points which are tailored to support different wireless requirements based on different environments.

## Next Generation Wireless

UniMax Access Points come with the best, latest hardware elements using state-of-the-art chipsets which ensure high performance throughout high density & complex RF environments. They are capable of handling up to 256 concurrent devices and speeds of 2200 Mbps on both 2.4 and 5 GHz channels. Ensure seamless connectivity to all your end users with optimally performing Access Points. The Access Points come with latest features like SD-WAN, software-defined radios, dynamic policies, SSID-based VLAN, dynamic channel assignment, presence services, application filtering, guest access and more.

## Zero Touch Provisioning

All UniMax Access Points come with universal plug and play which makes it easy for you to deploy your wireless networks. Centrally manage and configure all Access Points, push configuration settings on to Access Points remotely and reduce your network deployment timespan to enjoy a faster WiFi experience, faster.

## Flexible Manageability

Make network management easier for your IT administrators with flexible management options like remote configuration through a central console. Flexibility of management allows IT administrators to remotely manage & monitor large hotspots spread across various locations.

## Enterprise Enabled

With advanced functionalities to manage all enterprise requirements and creating strong security postures across all enterprise networks.

## Faster WiFi over Longer Distances

UniMax Access Points come with built in power amplifiers to deliver consistent, high speed WiFi over long range and noisy RF environments. In outdoor environments where long range connectivity is

important, our Access Points provide connectivity up to one hundred meters away.

## Ergonomic Design

Designed for indoors and outdoors to support all operating environments. Indoor Access Points come with a simple, elegant design to maintain the aesthetic of the environment with different mounting & installation setups which include wall mounting, ceiling mounts and more. Our outdoor

Access Points come enclosed in a metal casing to protect from potential hazards on field. They are built to provide sustained connectivity across uncertain terrain and environments.

## Mobile Connectivity

MobiMax Access Points from Indio provide support for Satellite and LTE backhauling for connecting remote areas and places where there is a lack of cabled infrastructure backbones. MobiMax also provides support for vehicular connectivity through LTE powered internet connections.

## Get the best of WiFi.

Our solutions give you the best of wireless hardware at the best of prices. UniMax Access Points are built to last and provide an uninterrupted WiFi experience to end users. We can help your business or corporate establishment ensure seamless WiFi connectivity & fulfil all of your wireless needs.
